Introduction

- A support vector machine (SVM) is a computer algorithm that learns by example to assign labels to objects.
- In simple words we can say that SVM is a classification technique.
- It is a kind of supervised learning method that analyze data and recognizes pattern.

Introduction

- We have to use training set to first train our machine then after it can predict the next unseen pattern weather it belongs to one or other class.
- Some applications are like an SVM can learn to recognize handwritten digits by examining a large collection of scanned images of handwritten zeroes, ones and so forth.

Motivation

- SVM performs well in practical applications.
- Can be used in text classification/recognition.
- When using with images it gives better accuracy compare to neural network.
- Also can be used in regression.

- Consider the following figure.
- o Here green and red

 dots represent different 10

 classes and blue is the

 one for which we have 4

 to identify to which it

 belongs to.

- Human eye is very good at pattern recognition. By just looking once the figure we can find different clustering.
- But for machines we can use equation like if Y=2*X then it belongs to class 1 (Green) and vice versa.

 Here we can draw a line which separates this two classes.

- This works for only for 2D.
- For 3D and 1D next slide shows an exp. of each.

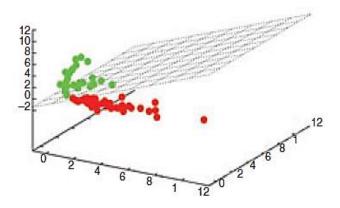

1D

3D

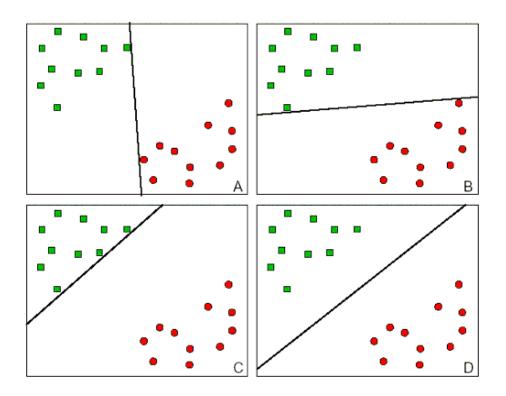

Dot

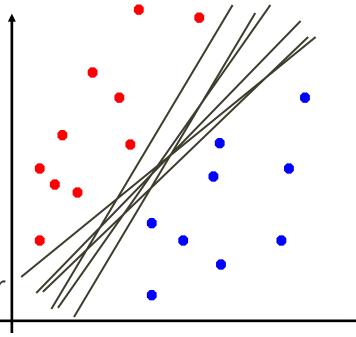

Hyperplane

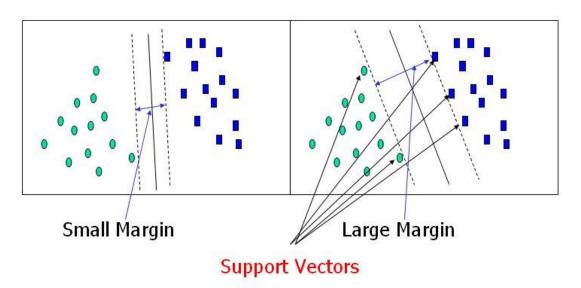

- For 2D as shown we can separate two classes by a single line like wise for 1D we can use a single dot and for 3D we have to use a "hyperplane" to separate two different classes.
- Now let's look at some problems regarding this technique.

- As you can see
 here many possible
 lines can be drawn
 between this two
 classes.
- The problem is which one to consider for portioning.

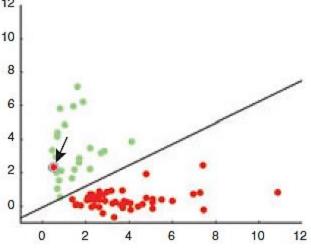

• The solution to this problem is given as choose the line that has maximum margin from both class points.

 The reason for choosing such line is obvious that it is more robust to outliners and do it has strong generalization ability.

 The second kind of problem is because of outliners. As many practical data cant be separated cleanly.

 To come up with this kind of problem we have a technique called "Soft Margin".

- This allows some data points to push their way through the margin of the separating hyperplane without affecting the final result.
- Of course, we don't want the SVM to allow for too many misclassifications.
- This value is generally user dependent which defines how many observations are allowed to violate the separating hyperplane.

 To understand this let's first consider an example of classification based on only one value(1D).

• Here as we can see there is no way to place a single dot such that it separates two different classes.

 To solve this kind of problem we have to use kernel function like here if we use square than we will get some diagram

like:

- Now as we see this function simply transforms 1D data to 2D. And we can then classify data easily.
- In general, a kernel function projects data from a low-dimensional space to a space of higher dimension.
- If proper function is chosen than data will be separable in higher dimension space.

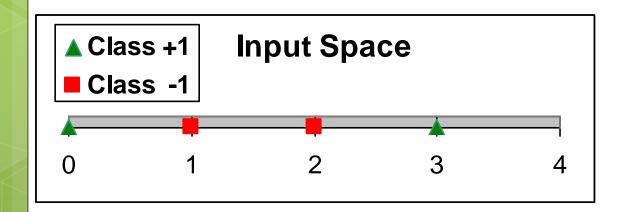

Input Space

Feature Space

Simple SVM Example

Class	X ₁
+1	0
-1	1
-1	2
+1	3

- How would SVM separates these points?
 - o use the kernel trick
 - $\bullet \Phi(X_1) = (X_1, X_1^2)$
 - o It becomes 2D.

Simple Points in Feature Space

Class	X ₁	X ₁ ²
+1	0	0
-1	1	1
-1	2	4
+1	3	9

All points here are support vectors.

SVM Calculation

- Positive : $\langle \mathbf{w} \bullet \mathbf{x} \rangle + \mathbf{b} = +1$
- Negative : $\langle \mathbf{w} \bullet \mathbf{x} \rangle + \mathbf{b} = -1$
- Hyperplane: $\langle \mathbf{w} \cdot \mathbf{x} \rangle + \mathbf{b} = 0$
- ofind the unknowns, w and b
- Expending the equations:

$$ow_1x_1 + w_2x_2 + b = +1$$

$$ow_1x_1 + w_2x_2 + b = -1$$

$$ow_1x_1 + w_2x_2 + b = 0$$

Use Linear Algebra to Solve w and b

- $w_1x_1 + w_2x_2 + b = +1$ $w_10 + w_20 + b = +1$ $w_13 + w_29 + b = +1$
- $\mathbf{o} \mathbf{w}_1 \mathbf{x}_1 + \mathbf{w}_2 \mathbf{x}_2 + \mathbf{b} = -1$ $\mathbf{w}_1 \mathbf{1} + \mathbf{w}_2 \mathbf{1} + \mathbf{b} = -1$ $\mathbf{w}_1 \mathbf{2} + \mathbf{w}_2 \mathbf{4} + \mathbf{b} = -1$
- Solution is $w_1 = -3$, $w_2 = 1$, b = 1
- SVM algorithm can find the solution that returns a Hyperplane with the largest margin

Use Solutions to Draw the Planes

Positive Plane:

$$\langle \mathbf{W} \bullet \mathbf{X} \rangle + b = +1$$

 $\mathbf{W}_{1}\mathbf{X}_{1} + \mathbf{W}_{2}\mathbf{X}_{2} + b = +1$
 $\Rightarrow -3\mathbf{X}_{1} + 1\mathbf{X}_{2} + 1 = +1$

$$\rightarrow x_2 = 3x_1$$

X ₁	X ₂
0	0
1	3
2	6
3	9

Negative Plane:

$$\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = -1$$

 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = -1$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$
 $\langle \mathbf{w} \bullet \mathbf{x} \rangle + b = 0$

Simple Data Separated by a Line

SVM Applications

- SVM has been used successfully in many real-world problems
 - text (and hypertext) categorization
 - image classification
 - bioinformatics (Protein classification,
 Cancer classification)
 - hand-written character recognition
 - Gene Expression Data Classification
 - Face Detection and Face Recognition

Advantages

- The absence of local minima.
- Is more accurate when applied to real life problems.
- SVMs deliver a unique solution. This is an advantage compared to Neural Networks, which have multiple solutions associated with local minima and for this reason may not be robust over different samples.

Disadvantages

- Choice of kernel function and parameter is important. Otherwise it will lead to state where no classification is possible.
- A second limitation is speed and size, both in training and testing sets.
- o It is sensitive to noise
- A relatively small number of mislabeled examples can dramatically decrease the performance.
